Turn Back Time

A company set up in order to research and develop a system to help improve arterial health.

International Head Office: Welwyn Garden City
Hertfordshire
UK

Offices also in: UK
Canada
Australia
Kenya
Nigeria

turnbacktime

An Invitation

We would like to offer you the opportunity to add extra value to your business with a unique new product.

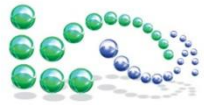

turnbacktime

About the Opportunity

This opportunity is based around a Class II medical device that has been developed with one of the world's largest suppliers of medical equipment.

turnbacktime

What will our system do for your business?

Testimonial:

I was introduced to Cliff Spolander in Aug 2011 who showed me this machine call Turn Back Time which revealed your biological age and general arterial health and I was amazed. I am a Kinesiologist, have a busy clinic and also run The Academy for Systematic Kinesiology teaching many students each year to become health professionals. Time is always an issue with me (as it is with most of us) and I am continually shown new products by people although this was different and I saw how helpful this device could be to my clients and my students.

I bought one straight away and have been using it ever since, my clients love being tested and enjoy reading the report to understand what is going on inside. We then discuss options to either keep healthy or move forward with lifestyle changes/supplements and of course they can take the report to their doctor if concerned. All my clients book follow up sessions with Turn Back Time even the people that showed younger than their actual age as they want to keep there! My clients are also recommending friends to come and be tested so my business is growing as a result.

Turn Back Time has also been great for my students, helping with their case studies, to earn an income whilst training plus help them see which supplements would be best for their clients circulatory health.

I would recommend anyone interested in health and helping people to go ahead and become a TBT consultant, the online training is very thorough and Cliff is always there for you if you have any queries. The machine has more than paid for itself within the first month and I am over the moon.....A big thank you to Turn Back Time!

Claire Moffat The Academy of Systematic Kinesiology (T.A.S.K.)

turnbacktime

What will our system do for your business?

To help your business grow, our system will:

- Provide you with a valuable tool to help assess the health of your client
- Help you provide suitable advice for your clients needs
- Give you a reason to contact all of your clients
- Increase business from referrals
- Generate repeat business
- Create a new income stream

turnbacktime

What will our system do for your clients?

It will provide them with detailed information on four areas of their health:

Arterial Stiffness

Assists your client to see how improving their arterial health will contribute to a reduced risk of heart attacks and strokes

Blood Pressure

Helps your client to become aware of the importance of monitoring their blood pressure

Body Mass Index (BMI)

Informs your client that being overweight can cause many health problems

Biological Age

Provides a marker to help clients see how the decisions and changes they make affect their state of health

turnbacktime

What is a Class II Medical Device?

The device must have more than the simple general controls to ensure safety and effectiveness.

It must comply with 'special controls': Special labelling requirements and mandatory performance standards recognised in Europe and internationally.

All devices require precise calibration and are extremely accurate.

turnbacktime

Why is the condition of your clients' arteries so important?

British Heart Foundation statistics state that 1 in 3 of us will have either a heart attack or stroke.

In the majority of cases the main cause is narrow arteries.

turnbacktime

What do Cardiologist say about Turn Back Time?

We are sure that many such health care providers will want to expand the range of screening they offer. The Turn Back Time test is a very simple one to administer and is completely safe and fits naturally within this range. The patient would then be given the appropriate information generated by the report along with other general health and lifestyle advice.

Dr Khalid Barakat MA (Oxon), MBBS (Lon), FRCP (UK)
Consultant Cardiologist

More and more companies understand the importance of maintaining the well-being and health of their employees. Many offer annual health screening programmes and it would seem to us that the Turn Back Time arterial stiffness testing would be a huge benefit to this type of programme, given that it is simple, relatively inexpensive and, a more safe and precise way of assessing vascular stiffness and vascular risk in the work environment.

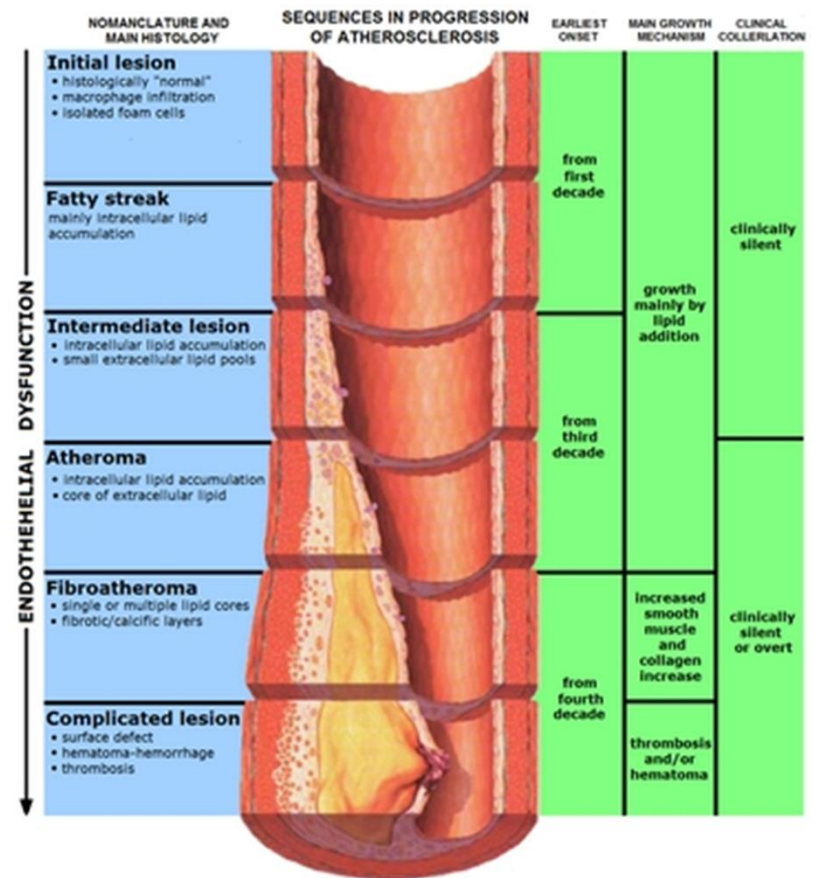

Dr Stephen Rex B Sc.(Hons.) MB BS(Hons.) MRCP
Consultant Cardiologist

turnbacktime

Arterial Stiffness

Restricts blood supply to the skin, heart, brain and other vital organs

turnbacktime

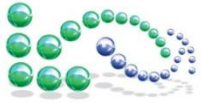

Red Blood Cells

The main way for the human body to distribute oxygen.

Cells are filled with haemoglobin a bio molecule that can bind to oxygen

Narrow arteries resulting in poor oxygen supply to the body can cause many problems.

turnbacktime

A lack of oxygen caused by restrictive arteries can be a contributory factor to:

- Heart attacks
- Strokes
- Decrease libido & sexual satisfaction
- General fatigue
- A feeling of weakness, particularly in the legs
- Low levels of fitness
- Breathlessness
- High blood pressure
- Breathing problems
- Angina

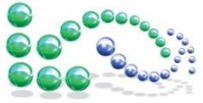

How many of your clients would like to protect themselves against these symptoms?

turnbacktime

In the United Kingdom

British Heart Foundation statistics show that diseases of the heart and circulatory system are the main cause of death in the UK and account for almost 191,000 deaths each year.

turnbacktime

How does our system work?

First we use equipment to test the condition of a person's arteries, along with their blood pressure.

Our system then generates a comprehensive, easy to understand, seven page health report.

turnbacktime

How does the equipment measure Arterial Stiffness?

The device measures the size of the 'Pulse Wave'

The softness of the artery and the volume of blood delivered determines the size of the pulse wave

The smaller the pulse wave, the stiffer the artery

**HOW STIFF IS YOUR ARTERIES?
KNOW & MONITOR THEIR CONDITION BEFORE IT'S TOO LATE!**

Progression of Arteriosclerosis

S-Value Measurement Result LCD Display	Pulse Wave Pattern	VITAL VISION
 1 to 3 bars appear when normal cardiovascular system is suspected (Pattern 1).	 reaching its highest point, decreases gradually. The softness of the artery and the volume of blood delivered by one cardiac output determine the size of the pulse waves.	When an artery of normal stiffness is measured, the pulse wave generated during deflation of the cuff first appears when cuff pressure approaches systolic blood pressure. The pulse wave then rises and after
 4 to 6 bars appear in the case of mild to moderate arterial stiffness, diabetes obesity, old age, and high stress (Pattern 2).	 Use this device for monitoring the condition of your arteries on a regular basis.	4 to 6 bars suggest a condition of progressing arterial stiffness. Arterial stiffness and diabetes are progressive pathologies.
 7 to 8 bars appear in the case of arterial stiffness, diabetes, obesity, old age, and high stress (Pattern 3).	 Arterial hardening begins when the normally soft inner side of the arterial wall suffers a breach. This area thickens with collagen. As a result, a change occurs in the mechanical laws of the arterial walls.	7 to 8 bars appear when the disposition of the artery under measurement differs from that of a normal artery. Arterial hardening begins when the normally soft inner side of the arterial wall suffers a breach. This area thickens with collagen. As a result, a change occurs in the mechanical laws of the arterial walls.

turnbacktime

Blood Pressure

The monitoring equipment will accurately determine both Systolic and Diastolic blood pressure.

High blood pressure can cause:

- Cardiovascular disease such as angina (*chest pain caused by reduced blood flow*), stroke, heart attack, heart failure and irregular heart beat
- Kidney damage
- Damaged sight

turnbacktime

Body Mass Index (BMI)

Our system will help track your clients' weight-to-height ratio (BMI). Being overweight can cause a range of health problems:

- High blood pressure
- Heart disease
- Stroke
- Diabetes
- Gout (joint pain caused by excess uric acid)
- Sleep apnoea (interrupted breathing during sleep)
- Osteoarthritis (wearing away of the joints)

turnbacktime

Biological Age

Our advanced Class II medical equipment, together with our unique software can determine and track your clients' biological age using a range of indicators, including arterial health, blood pressure and BMI.

turnbacktime

What is the definition of Biological Age?

The active rate at which the body is aging. It is a true measurement of a person's current health, life expectancy, and future quality of life.

This is different to a person's chronological age, which is how many years they have been alive.

turnbacktime

The Health Report

The comprehensive seven-page Health Report is unique to each client.

Easy to understand, it clearly sets out results and recommendations based on test results and covers the following areas:

- Arterial Stiffness
- Blood Pressure
- BMI
- Biological Age

It contains recommendations for specific natural foods based entirely on the clients test results.

turnbacktime

Monitoring your Clients' progress

Your clients are likely to want repeat testing to enable them to monitor their progress and ascertain their ongoing requirements for natural foods and medical advice.

Each time your client has a repeat test, their results are added to a database and the charts within the report will track your client's progress or regression over months and years.

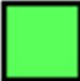

turnbacktime

Repeat Tests and Supplement Sales

The Health Report contains a guide as to when your client should return for a repeat test.

 Test result is much higher than the statistical average for your age and height group. Remedial attention required. We advise implementing the Consultants recommendations with immediate effect. Further test strongly advised within 30 days.

 Test result does not match the statistical average for your age and height group. Following your Consultants recommendations may gradually bring your results closer to the statistical average. Follow up testing recommended.

 You have had a good result. Your results match the statistical average for your age and height group. However the condition of the body can rapidly change and we recommend testing ever three months.

turnbacktime

The Health Report: Stiffness Index

Stiffness Index: 2

Repeat testing, tracked through the database, shows that the arterial stiffness of this client has dropped significantly over the 12 month test period.

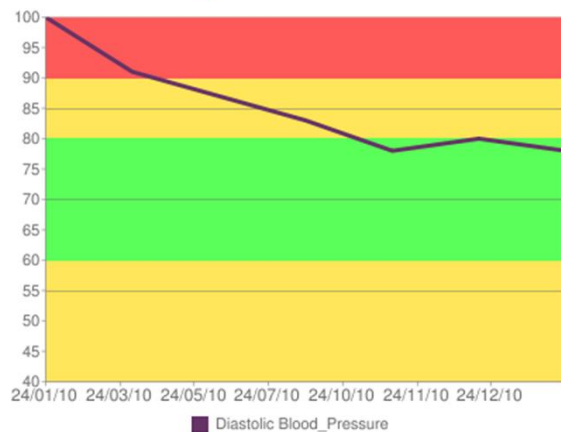

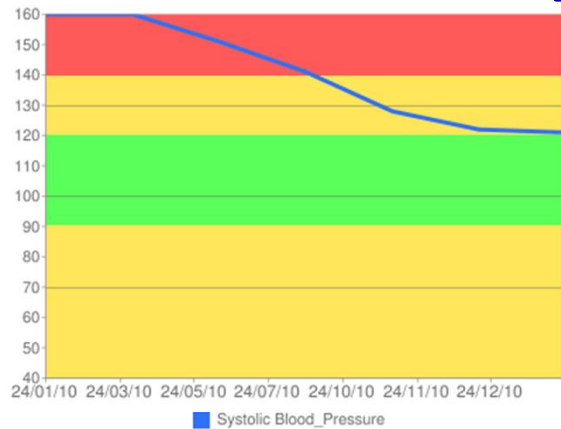

turnbacktime

The Health Report:

Blood Pressure

Your blood pressure: 121/78

Here we can see that there has been a significant reduction in both systolic and diastolic blood pressure over the test period.

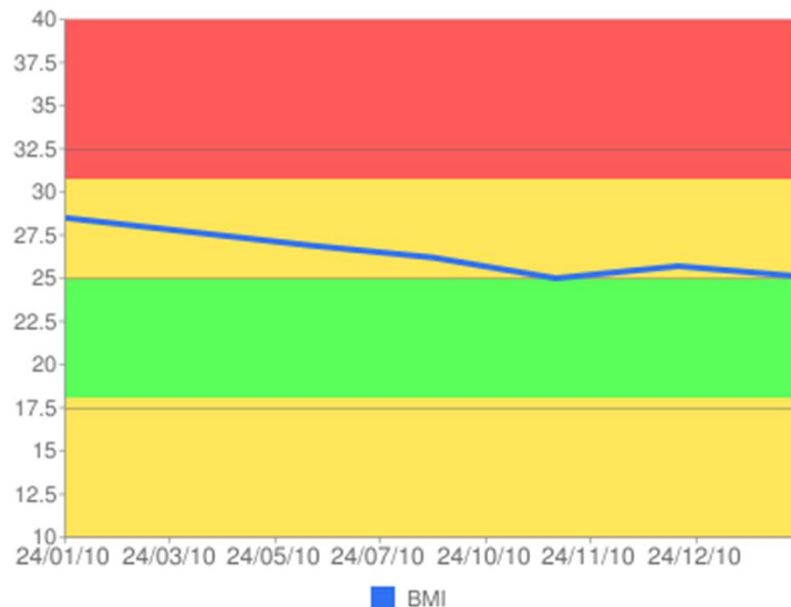

turnbacktime

The Health Report:

BMI

Your BMI is 25.1

The client's weight and BMI has reduced to fit within recommended guidelines.

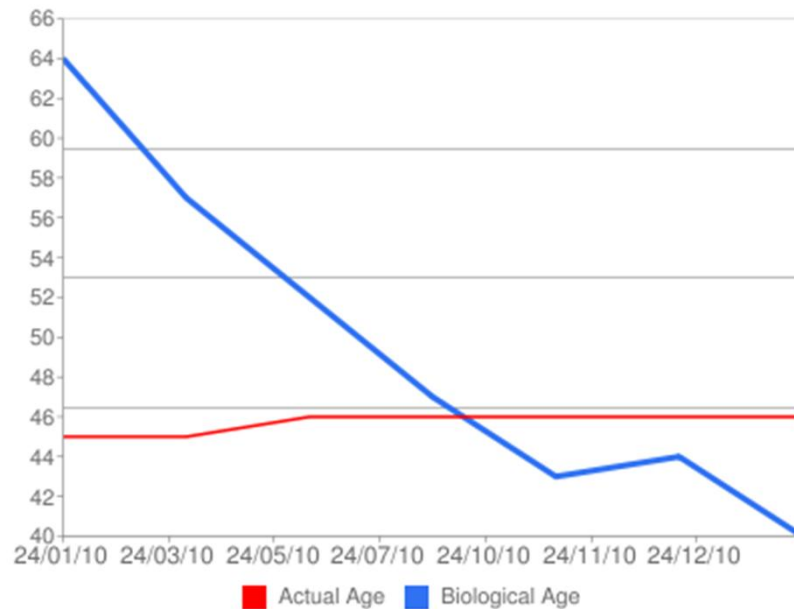

When your client loses weight, their biological age will drop. This provides clients with a real incentive to focus on healthy weight loss.

turnbacktime

The Health Report: Biological Age

Your Biological Age Result: 40

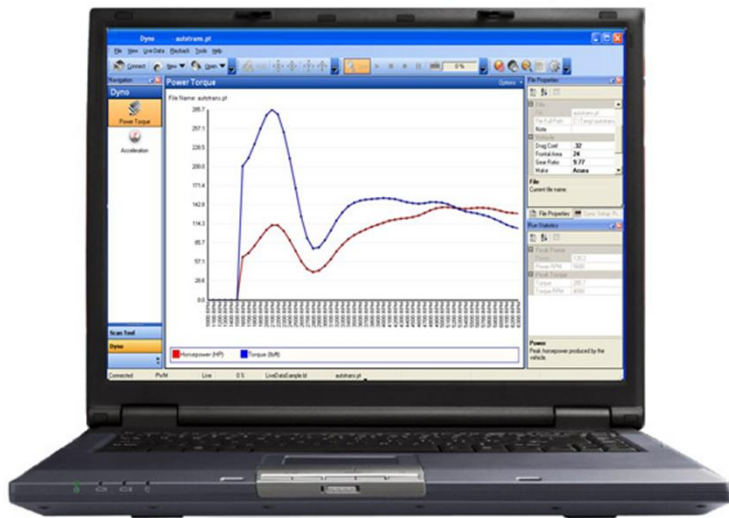

There has been a dramatic drop in the client's biological age (blue line) over the test period. (The tests were carried out over a 12 month period, so chronological age (red line) has risen by 1 year)

turnbacktime

To use our system, all you need to provide is:

Computer

Mobile Internet Access

turnbacktime

Monitoring Equipment

turnbacktime

Quick & Easy

The procedure is quick and easy:

Taking your clients' readings should take less than five minutes.

Discussing the health report with your client should take about 20 minutes.

We recommend allocating approximately 15 to 20 minutes with your client.

turnbacktime

How to use the System

Put the arm cuff on to your client and press the start button.

turnbacktime

How to use the System

Click the 'Calculate Biological Age' button and the system will produce a unique health report for your client.

Calculate Biological Age >>>

turnbacktime

Our System can increase your income, while helping your clients stay healthy and happy

- Each test costs you as the Consultant £5.00. From January 2013 each test will cost £10.00.
- Although our RRP for the test is £40.00 (giving you a profit of at least £30.00 per test), you are free to set your own pricing structure, however the minimum you can charge is £30.00, unless otherwise agreed by the Country Coordinator.
- The recommendations within the health report can significantly boost your supplement sales.

turnbacktime

What does the System cost?

The setup cost for the system is just
£495.00 + VAT

The setup charge covers:

Setting up your online account, delivery of the arterial and blood pressure test unit, exam and certification and access to our telephone help line.

turnbacktime

Monthly Subscription

There is a subscription fee of **£25.00** per month that covers your user license and rental of the unit. This can be cancelled ***at any time*** with just one month's notice.

Each time we receive the subscription payment, we will credit your account with five **free** test credits with an RRP resale value of **£200.00**

turnbacktime

21 Day 'No Quibble' Guarantee

Simply return the test unit, undamaged and in the original packaging, within **21 days** of delivery and we will refund the **£495 + VAT** setup fee.

This will give you an opportunity to fully evaluate our system.

turnbacktime

Guarantee

The monitoring unit is supplied with a Lifetime Guarantee

If the unit becomes faulty due to a manufacturing error, we will replace it no matter how long you have had it.

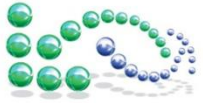

turnbacktime

SPECIAL OFFER

Offer

Perform 21 tests within the first 21 days

and we will credit your new account with
21 **FREE** test credits with a total RRP value of **£840.00**

turnbacktime

What will our system do for your clients?

It will provide them with detailed information on four areas of their health:

Arterial Stiffness

Assists your client to see how improving their arterial health will contribute to a reduced risk of heart attacks and strokes

Blood Pressure

Helps your client to become aware of the importance of monitoring their blood pressure

Body Mass Index (BMI)

Informs your client that being overweight can cause many health problems

Biological Age

Provides a marker to help clients see how the decisions and changes they make affect their state of health
